No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 12,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

Sequence 29, Application US/08841483B

GENERAL INFORMATION

APPLICANT: Prescott, Steven M.

APPLICANT: Tang, Wen

APPLICANT: Topham, Mathew

TITLE OF INVENTION: Diacylglycerol Kinase Isoforms Epsilon and Zeta and

TITLE OF INVENTION: Methods of Use Thereof

FILE REPRENCE: 2037.2.1a

CURRENT APPLICATION NUMBER: US/08/841,483B

CURRENT PILING DATE: 1997-04-22

EARLIER PILING DATE: 1996-04-22

MUMBER OF SEQ ID NOS: 33

SOFTWARE: PATENTIN VET. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-08-335-733D-13

Sequence 16, Application US/08335733D

Patent No. 6042831

SEQUENCE INFORMATION:

APPLICANT: Beretta, Alberto

TITLE OF INVENTION: IMMUNOLOGICALLY HOMOLOGOUS TO HLA NUMBER OF SEQUENCES: 90

CORRESPONDENCE ADDRESS:

ADDRESSEE: BARET & BOLTS, L.L.P.

STREET: 30 ROCKEfeller Plaza

CITY: NOW YORK

STATE: NY

COUNTRY: U.S.A.

ZIP: 10.112-0228

REDIUM TYPE: Diskette

COMPUTER: IBM Compatible

OPERATING SYSTEM: DOS

SOFTWARE: FEASE Version 1.5

CUMPUTER: IBM Compatible

OPERATION SYSTEM: DOS

SOFTWARE: PSESSO Version 1.5

CLASSIFICATION NUMBER: US/08/335,733D

FILING DATE: 10-NOV-1994

PRILOR APPLICATION DATA:

APPLICATION NUMBER: 35,263

REGISTRATION NUMBER: 312-408-2500

                                                                                                                                                                                                                                                                                   à
                                                              The peptide is an example of a synthetic peptide contg. a thiol- active cysteine residue and at least two positively charged amino acid residues situated at the the N and/or C terminal sides of the thiol-active cysteine. The peptide is pref. amidated at the C- terminus. The peptides may be used in conjunction with an antibody complex comprising a domain specific for an antigenic determinant of a complex of human IgA and alpha -1-antitrypsin, for use in therapy of rheumatoid arthitis. Admin. is oral or parenteral. See also AAR36613-74 and AAR37353-74
     -alpha-antitrypsin complex, useful for treating and preventing rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAR35090-100 and AAR34628-32 are peptides which were used to dealing the probes given in AAQ40219-34. These probes can be used to identify Bacillus thuringiensis (Bt) DNA which encodes insecticidally active endotoxin. Probe (a) identifies genes encoding a toxin effective against any sort of insect. Sequences (b) and (e) are specific for toxins against dipter and sequence (d), (o) and (p) for toxins active against diptera and sequence (d), (o) and (p) for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gene probe for identifying endotoxin sequences in Bacillus thuringiensis - are universal, type specific or gene specific, for rapid detection and characterisation of insecticidal activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Probe; Bacillus thuringiensis; Bt; insecticidal; active; endotoxin; lepidoptera; diptera; coleoptera.

The sequence is a specifically claimed example of a group of generically claimed linear peptides which are integrin inhibitors. In particular, the peptides inhibit interaction of the beta-3 integrin receptor with ligands. They can be used in human or veterinary medicine to treat e.g. thrombosis, cardiac infarct, arteriosclerosis, angina pectoris, tumours, osteoporosis, angiogenesis and restenosis after andioplasty. The peptides also stimulate wound healing; are antimicrobials (esp. used with implants, catheters etc.); and can be used to purify integrins by affinity chromatography. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New oligopeptide inhibitors of integrin - for treatment and prevention of cardiovascular diseases, e.g. thrombosis, or tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Integrin inhibitor; beta-3 receptor; thrombosis, cardiac infarct; arteriosclerosis; angina pectoris; antitumour; osteoporosis; angiogenesis; restenosis; angioplasty; wound healing; antimicrobial; affinity chromatography.

6,7-di(aliphatic acyloxy)-4-thiaheptanoic acid residue and which have an
additional 2-8 amino acids, at least one of which is acidic. The acyl
corpus are pref. higher aliphatic acyl groups, pref. n-hexadecancyl (Pam)
or n-tetradecancyl (Myr). The peptides can be synthesised, but mixtures
of them, designated TAM-1511 complex, can also be obtained by culturing
them, designated TAM-1511 complex, can also be obtained by culturing
of them, designated TAM-1511 complex, can also be obtained by culturing
them, designated TAM-1511 complex, can also be obtained by culturing
of them, designated TAM-1511 complex, can also be obtained by culturing
them, designated TAM-1511 complex, can also be obtained by culturing
acyl groups on the 1-position amino acid. The peptides have
immunostimulating and leukocyte-increasing activity and can be used for
therapy or prophylaxis of leukocytepenia (caused by radiotherapy or
chemotherapy of cancers), as a haematopoiesis stimulator in bone marrow
transplantation, and as an immunological enhancing agent for increasing
leukocytes. This sequence is that of TAM-1511B. (Updated on 27-AUG-2003 to correct DN field.) (Updated on 27-AUG-2003 to correct OS field.)

The nucleotide sequence which encodes AAR78189, a B. thuringiensis (B.t.) endotoxin derived peptide, is the probe AAQ91782. The probe can be used for the detection of endotoxin producing B.t. microbes. The probe aids in the search for useful microbes hosting toxin encoding genes, specifically from coleopteran, lepidopteran, mite and dipteran species. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleotide sequence used as probes to identify Bacillus thuringiensis are derived from the B.thuringiensis endotoxin genes, for identifying microbes which encode toxins.

The present sequence is Ad7 cel from Adenovirus. The cel domain is also found in rat retinoblastoma (Rb)-interacting zinc finger (RIZ) protein an unclear phosphoprocein that acts as a cell calferentiation factor. RIZ can modulate cell growth by binding to Rb protein, which is involved in regulating cell proliferation. In addition, RIZ can act to regulate transcription. RIZ functions to maintain cells in the Gl phase of the cell cycle, by interacting with Rb through the cr2 domain of RIZ. Rat RIZ protein contains a number of Grpase motifs (see AAB1205 and AAB12059 to AAB12104). RIZ protein is a PR comain protein and is present primarily in the cell nucleus. RIZ gene mutations may be implicated in various cancers such as melanoma, neuroblastoma, leukaemia and breast cancer, and so the RIZ gene may be used in gene therapy for these disorders. Since RIZ protein is implicated in cell cycle arrest, inhibition of RIZ activity may be useful in neurodegenerative disorder therapy e.g. for Parkinson's, Huntingdon's or Alzheimer's disease, paralysis or motor neurone disorders, or cardiac disorders e.g. heart disease, where the ability to induce neural/cardiac tissue proliferation would be useful. The present sequence was used for sequence homology comparison. (Updated on 12-SEP-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytotoxic T cell lymphocyte; CTL; anti-HIV; viral disease; HIV;

The invention relates to identification of cytotoxic T cell lymphocyte (CTL) epitopes (AAM22116-AAM23484) that generate anti-HIV activity. CTL are a major protective mechanism against viral diseases. Antibodies may neutralise extracellular human immunodeficiency virus (HIV) and limit or prevent infection of cells in the host, but CTL will limit viral production by killing the cell. The CTL epitopes are useful in medicine, in the manufacture of vaccines or diagnostic agents
                                                                                                            The generation of cytotoxic T cell lymphocytes epitopes for use in anti-HIV vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Residual protease II; RP-II; additive; cleaning composition; detergent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to identification of cytotoxic T cell lymphocyte (CTL) epitopes (AAM22116-AAM23484) that generate anti-HIV activity. CTL are a major protective mechanism against viral diseases. Antibodies may neutralise extracellular human immunodeficiency virus (HIV) and limit or prevent infection of cells in the host, but CTL will limit viral production by killing the cell. The CTL epitopes are useful in medicine, in the manufacture of vaccines or diagnostic agents
                                                                                                                                                                                                                                                                                                                     use in anti-

The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid acquence selected from 51 defined amino acid sequences (ABL5534) to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of proup-based vaccines has several advantages over traditional vaccines, particularly when compared to the use of whole antigens in vaccines compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen, allowing for immune escape due to mutations. The groups for inclusion in an group-based vaccine may be selected from conserved regions of viral or
II) peptide used to design 646 sense primer (AAD03019). RP-II protease is useful as a constituent in additives, detergent compositions and other cleaning compositions, optionally in combination with other enzymes such as proteases, lipases, cellulases, amylases, peroxidases or oxidases. The variants of RP-II have improved properties such as substrate specificities, catalytic rate, stability, especially towards the action of proteolytic enzymes and improved resistance towards peroxidase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIV; HIV-1; human immunodeficiency virus; env; pol; gag; nef; vpr; vpu; vif; tat; cytotoxic T lymphocyte; CTL; immune response; epitope; antigen; vaccine; HIV infection; immunisation; virucide.

escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups (CTL and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. Asplisol to ABP25412 is not possible with traditional approaches. Bellication of the present invention. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid acquence selected from 51 defined amino acid sequences (ABL25347 to ABP253597). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of particularly when compared to the use of whole antigens in vaccines, particularly when compared to the use of whole antigens in vaccines compositions. There is evidence that the immune response to whole

escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups (CTL and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches ABPIISOI to ABP25412 represent peptide sequences used in the exemplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)
antigens is directed largely toward variable regions of the antigen, allowing for immune escape due to mutations. The groups for inclusion in an group-based vaccine may be selected from conserved regions of viral or tumour-associated antigens, which therefore reduces the likelihood of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequence selected from 51 defined amino acid sequences (ABL25347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of

particularly when compared to the use of whole antigens in vaccine compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen, allowing for immune escape due to mutations. The groups for inclusion in an group-based vaccine may be selected from conserved regions of viral or tumour-associated antigens, which therefore reduces the likelihood of escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups (GTL and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. ABP11501 to ABP25412 represent peptide sequences used in the exemplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; catalyst; diacylglycerol; DAG; phosphatidic acid; DAG modulator; diacylglycerol kinase alpha; DGK.

diacylglycerol kinase zeta-2 and their corresponding cDNAs. Human diacylglycerol kinase DNA is useful for coding human diacylglycerol kinase, which is useful for catalysing the conversion of diacylglycerol to phosphatidic acid. In particular, the human diacylglycerol kinase and its DNA are useful for decreasing intracellular levels of diacylase and glycerol (DAG) and for increasing intracellular levels of phosphatidic acid in cells. The present sequence is a peptide of human diacylglycerol kinase (DGK) alpha (residues 432-439). The forward RT-PCR primer (AADOS702) based on this sequence is used to amplify human DGK alpha CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human leukocyte antigen ligand database assembled by producing HLA having loaded ligands, isolating and sequencing loaded ligands to obtain HLA ligand data and populating database in computer system with ligand data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a human leukocyte antigen (HLA) (e.g. soluble HLA) ligand database assembled by a process which involves providing a computer system capable of storing HLA data as a database, producing HLA having ligands loaded on it, isolating the loaded ligands from HLA, sequencing the loaded ligands to obtain HLA ligand data, and populating the database with HLA ligand data. Also described: (1) accessing HLA (e.g. sHLA) lata stored in a database; and (2) a computer system for HLA (e.g. sHLA) ligand database. The database is populated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             human leukocyte antigen; predictive algorithm; database; major histocompatibility complex; viral; bacterial; tumour.

with HLA ligand sequences, motifs, extended motifs, submotifs, ligands unique to infected cells, tumour specific ligands, as well as a collection of current and future specific ligands, as well as a database which contains endogenously bound and loaded ligands facilitates searching of viral, bacterial, tumour or human protein sequences for ligands likely to bind a particular HLA class I or class II protein. The potential matches with sHLA ligand discrete sequences for potential matches with sHLA ligand discrete sequences or sHLA ligand motifs of sequences. Due to the completeness and concentration of sHLA obtained to date, better sequencing data of numerous endogenously loaded HLA ligands to each other and to the genomic sequence, better and to the genomic sequence, better and to the genomic sequence, better and ligand database, and by comparison of such ligands to each other and to the genomic sequence, better and to the genomic sequence, better and ligand database. ABPS5692 to ABPS5912 represent anilso found in the sHLA ligand database. ABPS5692 to ABPS5912 represent amino acid sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                @ m 0 0 0 0

                           Sequence 17234, Application US/09252991A

Batent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TILLE REFERENCE: 10196.18
FRILE REFERENCE: 1999-02-18
FRILOR APPLICATION NUMBER: US 60/074,788
RIOR PILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

                                                                                                                                                                                                                                          This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopathic, cytostatic, anti-HIV, haemostatic, nephrotropic, antianaemic, antipsoriatic and hepatotropic activity. The polynucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell particularly useful for diagnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABUI1450-ABUI1845 represent the MDDT polynucleotides encoded syndrome chara for the invention. NOTE:

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at the way obtained in electronic format from WIPO at

```
The invention relates to the entire genome of cyanophage S-2L, and to the protein encoded by it. Genes isolated from the genome of S-2L are useful for preparing enzymes for synthesis of D-bases (D = 2,6 diaminopurine), particularly D, dDMP and dDTP, or polymucleotides containing these bases, polymerases involved in metabolism of D-bases and deoxymucleotide can long for detection and/Or identification of S-2L, and for identifying agents that modulate synthesis of D-bases or polymucleotides containing them, and fusions of S-2L polympetides with an antigen can be used to raise specific antibodies, useful for detecting S-2L. This sequence corresponds to one of the proteins encoded by the cyanophage S-
                                                                                                                                                                                                                                                                                                                                                                                             genomic sequence for cyanophage S-2L, useful for identifying genes synthesis of 2,6-diaminopurine bases or polynucleotides containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopoiesis; nerve tissue regeneration; immune stimulation; anti-inflammatory; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                    요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapoutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33104 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   p47(phox); p67(phox); NADPH oxidase complex; proline-rich region; PTPase; Stal domain; inhibition; dynamin; cytochrome b245; reperfusion injury; septic shock; arthritis; asthma; vinculin; inflammatory bowel disease; adult respiratory distress syndrome; ischaemic heart disease.

The protein p47(phox) (AAR83825) interacts with protein p67(phox) in the NADPH oxidase complex via a C-terminal proline-rich region of p47(phox) binding to at least one C-terminal SH3 domain of p67(phox). The peptides AAR83814-24 were derived from the proline-rich region of p47(phox) and show inhibitory activity towards the binding of p47(phox) to p67(phox) as compared to the proline-rich region of a range of other proteins charasses. 30). The inhibitory peptides can be used for the treatment of chronic or acute inflammatory diseases e.g. septic shock, arthritis, asthma, adult respiratory distress syndrome, ischaemic heart disease, reperfusion injury or inflammatory bowel disease
                                                                                            New polypeptide(s) with antiinflammatory action - inhibit NADPH oxidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Selecting immunogens and diagnostic reagents using phage libraries - expressing oligopeptide(s) on the surface, useful for vaccines, particagainst hepatitis virus and auto:immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cryoglobulinemia type II; human hepatitis C; HCV; immunogen; specific diagnostic reagent; vaccine.

AAR62E96-R62600 and AAR63867-R63873 are specific diagnostic reagents and immunogens for type II cryoglobulinemia caused by/or associated with human hepatitis C virus (HCV). These peptides minic the HCV surface antigen (HCGAQ), therefore when injected into individuals not immune to HCV they elicit an immune response, specifically the production of anti-CAGAG antibodies. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; secreted protein; diagnosis; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprofective; nootropic; neuroprotective; antibacterial; virucide; fundicide; ophthalmological; gene therapy; pathological condition; autoimmune disease; rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cardiac arrest; cerebral ischaemia; cerebrovascular disorder; angiogenesis; nervous system disorder; Alzhaimer's disease; infection; ocular disorder; corneal infection; wound healing; skin aging; food additive; preservative.

contractive, anterimmentation antitypointerative; cyvolatelic; caracteric; caracteric; caracteric; caracteric; caracteric; caracteric; casobic; carebroprotective; nootheric; cyvolatic; carebroprotective; nootheric; control of the carebric can be used to prevent, treat or ameliorate copymention in e.g. humans, mice, rabbits, goats, horses, cats, condition or succeptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid architis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. carebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and censor and wound healing and epithelial cell proliferation, to be used to aid wound healing and epithelial cell proliferation, to respert skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to transplantation for supporting cell culture of primary tissues, to copy and in chemotexis. The proteins can also be used as a companiant organs before cophalities. AAC998099 to AAC99817 and AAB56076 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide #6746 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Probe; human; microarray; gene expression; cervical epithelial cell;

                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                   The present invention relates to human single exon nucleic acid probes (SENP: see AA110068-AA128459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithalial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and

displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide #8583 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Probe; microarray; human; placenta; antenatal diagnosis;
                                                                                                                                                                                                                     4 NOOOO

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure sene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow.
                                                                                                                                                                                                                                                                                                             Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemla; lymphoma; myeloma.
                                                                                                                                                                                                                                                                           Human bone marrow expressed probe encoded protein SEQ ID NO: 34738
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 4; SEQ ID NO 34738; 658pp + Sequence Listing; English.

                                                                                                                                                   RESULT 11
                                                                                                                                                                      AAM74432
                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ARA15135). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                    Protein #6980 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                               Human; gene expression; heart; microarray; vascular system; cardiovascular disease; hypertension; cardiac arrhythmia; congenital heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4 G O O

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                 Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer.
                                                              Human brain expressed single exon probe encoded protein SEQ ID NO: 33745.
                                                                                                                                                                                                                                                                                                             Single exon nucleic acid probes for analyzing gene expression in human brains.
                                                                                                                                                                                                                                                                                                                                                            present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                          Example 4; SEQ ID NO 33745; 650pp + Sequence Listing; English.

The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification for complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (1) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhospsis, hyperlipidaemia and hypercholesterolaemia which hyperlipidemia which sassociated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human peptide encoded by genome-derived single exon probe SEQ ID 33989.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; single exon probe; asthma; lung cancer; COPD; ILD;
chronic obstructive pulmonary disease; interstitial lung disease;
Human; liver; cirrhosis; hyperlipoproteinaemia; hyperlipidaemia;
hypercholesterolaemia; coronary heart disease.

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from thuman lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12819 open reading frames derived from the 12614 nucleic acid sequences mentioned in the specification, or their probes. Also included are a microarray comprising the novel set of probes which bybridies at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung in a cutsary comprising the array with a sample coil expressed in the human lung measuring genome, comprising (a) contacting the array with a sample coil expression to detectably labeled nucleic acids derived from human lung mins, and (b) measuring the label detectably bound to each probe of the array, deficitlying exons in a cutsaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridiation of a single exon probe, having a fregment identical to the predicted exon, the probe is included above mentioned microarray assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method above mentioned microarray assigning exons and (b) measuring the expression of each of the exons in evertal tissues and/or cell types using hybridiation to a single exon microarray having a probe with the exon, where a common pattern of expression of the exons ending hybridiation or an ending frames (offer exons endone pattern of a single gene, a peptide comprising on the exons endone in the tissues and/or cell types using hybridiation to a single gene, a peptide comprising on the exons endone in the secification, or encoded by the probes/open reading frames (offer). The probes are used for gene expression of the exons in a gene dear of the exons endone present sequence is a disease,
familial idiopathic pulmonary fibrosis, neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome, sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangicleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis, fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                measure gene expression in human lung samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 27; SEQ ID NO 33989; 634pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chen W, Rank DR;

The invention relates to human polynuclectides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymeries in other cell populations. The polymeries and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, includent of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Issued_Patents_AA:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-252-991A-30155

US-09-252-991A-30155

Sequence 30155, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J Rubenfield et al.

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION NUMBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR PLICATION DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 30155

LENGTH: 250
                                                                                                                                                                                                                                                               US-08-861-774E-66
